

## Automation Services

Dynamo Electric provides electrical engineering, control systems development, panel fabrication services, PLC/HMI/Motion programming, VFD integration and service tailored to each customer's specific needs.

Complete operator, maintenance, systems, and management training, and on-going maintenance and software support that are tailored to each customer's specific needs.

Project definition and specification of all control devices (from sensors through to final elements), true "turn key" implementation including design, programming, and commissioning, multi-vendor communication networks including interfacing plant floor data with in-plant or corporate main frame computers.

We deliver simple and complete industrial automation systems that are user friendly and technologically advanced.

From PLC to HMI, from new to retrofit, Dynamo Electric can assess and fill all of your industrial automation needs.
