

Switchgear Modifications & Upgrading

Full Refurbishment & Repairs

Our personnel are fully equipped with a wide range of experience to carry out full refurbishment and repairs of all types of switchgear.

Dynamo Electric has extensive experience in carrying out on site modifications of customer's medium voltage and low voltage equipment. Site work is often requested to add metering, upgrade protection, or change current transformers. We can modify panels using the original manufacturer's components, or supply and fit new certified parts to complete the project.
